JJ GLOBAL S.A.

Who we are

JJ Global S.A. is a Honduran company based in Corquín, Copán, in the heart of the western coffee region. We help companies, cooperatives, producer organizations and development projects build sustainability into their operations and across their value chain.

We bring together environmental management, climate science and field knowledge, with a team that works in the office and on the farm.

Technical rigor · Transparency · Local roots · Innovation

MISSION

To advance the sustainability of companies, producer organizations and value chains through environmental services, carbon management and climate-smart agriculture, with technical rigor, local knowledge and measurable results aligned with the SDGs.

VISION

By 2030, to be Central America's reference firm in corporate sustainability and low-carbon productive management, recognized for turning rural value chains into competitive, resilient models with proven impact.

Service lines	Specialized services	Seals and standards we implement	Support stages toward certification

SERVICE LINES

Our services

Four lines that can be contracted on their own or combined into a sustainability program built for your organization.

Corporate sustainability and environmental services

For companies that need to manage their environmental, social and governance performance, and prove it.

ESG · GRI

ESG strategy and sustainability reporting

Materiality, indicators and reports under GRI standards.

EIA · PERMITS

Environmental assessment and compliance

Environmental impact studies, assessments and management plans.

ISO 14001 · ISO 9001

Management systems

Design and implementation of environmental and quality systems.

ISO 45001

Occupational health and safety

Hazard identification, risk assessment and safety programs for field and plant staff.

Climate-smart agriculture

Low-carbon productive management for farms, cooperatives and agribusinesses.

RESILIENCE · CLIMATE ADAPTATION · SOIL HEALTH

Regenerative agriculture for climate resilience

We support farms and cooperatives in the transition to regenerative practices that restore soil, water and biodiversity, so crops can withstand droughts, extreme rainfall and pests while remaining productive and profitable.

- **Climate vulnerability assessment** of the farm and adaptation plan
- **Soil health:** permanent cover, organic amendments, biofertilizers and minimum tillage
- **Water:** rainwater harvesting, moisture retention and protection of water sources
- **Biodiversity:** diversified shade, living fences and integrated pest management
- **Measuring results:** soil carbon, resilience and productivity indicators
- **Readiness for regenerative labels** and access to market premiums

PRODUCTIVITY · ADAPTATION · MITIGATION

Climate-smart farm plans

Practices that raise yields and resilience while cutting emissions.

LOW EMISSIONS

Low-carbon production

Fertilization, pulp composting, wastewater and wet-mill efficiency.

AGROFORESTRY

Agroforestry and soils

Diverse shade, soil conservation and carbon in permanent crops.

CERTIFICATION

Certification and traceability

Readiness for sustainability and organic labels and deforestation-free requirements.

BPM · HACCP · ISO 22000

Food safety

Good manufacturing practices, HACCP plans and ISO 22000 / FSSC 22000 systems at mills, plants and agribusinesses.

FDA · FSMA

FDA compliance for export

FDA food facility registration, FSMA requirements and supporting documentation for U.S. importers.

Sustainable development and SDGs

Mechanisms that link the activities of companies and chains to measurable SDG targets.

2030 AGENDA

SDG alignment

Targets your operation contributes to and indicators to measure them.

VALUE CHAINS

Sustainable value chains

Risks and impacts from producer to market, with improvement plans.

REDD+ · BLUE CARBON

Carbon projects and ecosystem services

Project design for carbon markets and payments for environmental services.

COOPERATION

Development projects and safeguards

Design, baselines and evaluation with a gender and community participation approach.

Environment and climate

Measurement, reduction and reporting of greenhouse gas emissions for companies and supply chains.

GHG PROTOCOL · SCOPE 3

Insetting in coffee and cocoa supply chains

Carbon reductions and removals in buyers' supply chains, measured with ARRAIGO.

ISO 14064-1 · -2 · -3 · ISO 14067

Carbon footprint and GHG projects

Organizational and product inventories, reduction and removal projects, and readiness for validation and verification.

ISO 14068-1

Path to carbon neutrality

Roadmap, emission reductions, offsetting with quality credits and support for the claim ahead of verification.

SPECIALISED SERVICE · SCOPE 3

Insetting in coffee and cocoa supply chains

> Reduce your supply chain emissions where they originate: on the farm.

We design, implement, measure and report good production and processing practices on coffee and cocoa farms in Central America, so your company can reflect in its Scope 3 inventory the emission reductions and carbon removals achieved in its own supply chain.

JJ Global S.A.'s ARRAIGO platform is the field data capture, calculation and monitoring system for the entire programme.

What this service is not

- It is not a sale of carbon offsets or credits: you do not acquire a transferable asset.
- Results cannot be resold or used to claim carbon neutrality.
- It is separate from credit project development (Verra, Plan Vivo or others), which is a different service.

Until assessed by an independent certification body, results are presented as the organisation's own verifiable measurement.

PROGRAMMES

ARRAIGO Programme

Carbon measurement, monitoring and verification for Central American coffee and cocoa. Measure, document and demonstrate the sustainability of your crops.

A carbon measurement, monitoring and verification platform designed for coffee and cocoa farms in Central America. ARRAIGO quantifies and documents, with field evidence, the carbon captured and the emissions reduced by each farm's sustainable practices.

It develops and implements carbon management based on the Greenhouse Gas Protocol (GHG Protocol) and IPCC guidelines, and prepares results for independent verification. Until assessed by an independent body, results are presented as the organisation's own measurement.

Cycle summary: emissions and removals shown separately, measurement scope and contribution to the SDGs. Screenshots with sample data. They do not correspond to any real farmer or organisation.

How we implement a certification

1 Gap assessment against the standard

2 Implementation plan and budget

3 Internal control system, records and training

4 Internal inspection and corrective actions

5 Support during the external audit

JJ Global S.A. prepares and supports implementation. Certification is granted by the accredited certification body for each standard.

CERTIFICATION IMPLEMENTATION

Labels and standards

We prepare farms, cooperatives and agribusinesses to obtain and keep the certifications their buyers require, from gap assessment to audit.

ORGANIC
EU and USDA NOP organic
Production without synthetic agrochemicals under the EU regulation and the U.S. National Organic Program.

ORGANIC
JAS
Japan's organic agricultural standard, required to sell organic products in that market.

ORGANIC
Bio Suisse
Swiss organic standard with additional requirements on the whole farm, biodiversity and trade.

ORGANIC
Naturland
German organic standard that includes social and fair-trade criteria.

BIODYNAMIC
Demeter
Biodynamic agriculture: the farm as a living organism, with its own preparations and cycles. Built on an organic base.

REGENERATIVE
ROC
Regenerative Organic Certified: soil health, animal welfare and social fairness on an organic base.

SUSTAINABILITY
Rainforest Alliance
Sustainable agriculture: forest protection, labor rights, livelihoods and continuous improvement.

SUSTAINABILITY
C.A.F.E. Practices
Starbucks' responsible sourcing program: quality, economic transparency, social responsibility and environmental leadership.

BIODIVERSITY
Bird Friendly
Smithsonian seal for diverse shade-grown coffee that conserves bird habitat. Requires organic certification.

FAIR TRADE
Fair Trade
Minimum prices, social premium and democratic organization of small producers (Fairtrade, SPP).

GENDER
Con Manos de Mujer
Recognizes coffee produced and managed by women, with equity and participation criteria along the chain.

CLIMATE
Carbon footprint
Quantifying product or organizational emissions with ISO 14067, ISO 14064-1 and the GHG Protocol.

CLIMATE
Carbon neutral
Emission reduction and offsetting pathway under ISO 14068-1, with a third-party verified claim.

FOOD SAFETY
HACCP
Hazard analysis and critical control points at mills, plants and agribusinesses; the basis of ISO 22000 and FDA requirements.

ISO standards and reference frameworks

ISO 14064
Parts 1, 2 and 3: GHG inventories, projects and verification.

ISO 14067
Product carbon footprint.

ISO 14068-1
Path to carbon neutrality.

GHG Protocol
Scope 1, 2 and 3 emissions.

ISO 14001
Environmental management systems.

ISO 9001
Quality management systems.

ISO 45001
Occupational health and safety.

ISO 22000
Food safety, HACCP and GMP.

FDA · FSMA
Requirements to export food to the U.S.

GRI
Sustainability reporting.

Verra · CCB
Carbon projects in the voluntary market.

SDGs
Sustainable Development Goals.
